

1. Use the nslookup command to find the IP address of www.flipkart.com and note down any additional DNS information you discover.
- nslookup of www.flipkart.com

```

C:\Windows\System32>nslookup www.flipkart.com
Server:      UnKnown
Address:     fe80::6231:92ff:fe16:8c45

Non-authoritative answer:
Name:        e348826.dsca.akamaiedge.net
Addresses:   23.64.140.250
              49.44.140.227
Aliases:     www.flipkart.com
              www.flipkart.com.edgekey.net

C:\Windows\System32>
```

- After observing output this information, I discovered:
- Domain – www.flipkart.com
- DNS server – unknown
- DNS server address – fe80::6231:92ff:fe16:8c45
- Resolve hostname – e348826.dsca.akamaiedge.net
- IPv4 addresses – 23.64.140.250 and 49.44.140.250
- Aliases – www.flipkart.com and www.flipkart.com.edgekey.net
- Responsive type – Non-authoritative answer

2. Perform a Google dorking search to find any public Instagram profiles from your college domain (e.g., site:instagram.com "@yourcollege.ac.in") and list the first 3 results you find.

- Google dorking query – site:Instagram.com "@herts.ac.uk"

First 3 results:

1. University of Hertfordshire - @uniofherts
2. Herts international office - @uniofhertsintl
3. University of Hertfordshire post - @uniofherts

3. Use the whois tool (online or command line) to gather registration details for the domain **zomato.com** and summarize the organization name, country, and registration date.

Here are whois details for **Zomato.com**

Detail	Information
Domain	Zomato.com
Organization/registrant	Zomato/Zomato limited
Country	India (IN)
Registration date	24 February 2006

4. Identify all subdomains of **myntra.com** using a free online tool like **SecurityTrails** or **crt.sh** and list at least 3 subdomains you find.

- I have identified multiple subdomains which are associated with **myntra.com** and here, I have listed 3 subdomains:
- www.myntra.com
- **Jobs.myntra.com**
- **Careers.myntra.com**

5. Pick any one method of footprinting (DNS lookup, whois, Google dorking, subdomain enumeration) and record a short screen capture (max 2 minutes) showing your process and findings for a popular Indian app domain (not the same as above).

```
C:\Windows\System32>nslookup www.phonepe.com
Server: UnKnown
