

1. Use Google search operators to find publicly accessible PDF files about IPL cricket rules. List the exact search query you used and share 3 working links you found.

- To find out publicly accessible PDF files about IPL cricket rules. I searched this query on Google:
- Filetype:pdf IPL cricket rules
- I have found these 3 pdf files which are accessible as follows:

1) TATA IPL 2026 Match Playing Conditions

https://www.iplt20.com/cms/files/jot2qw8s50z1/FDWOgjqZEtmCACIRiWTkk/cfa220d019b449e34689790ca654b67e/1774245217673_IPL_2026-Media_Accreditation_Terms_Conditions.pdf

2) TATA IPL Media Accreditation Terms and Conditions

https://assets.platform.staylive.io/platform_QMf45t1Vh2hm/extras/1775736835406_TATA_IPL_2026_Match_Playing_Conditions.pdf

3) Simon Fraser University

<https://www.sfu.ca/~tswartz/papers/ipl.pdf>

2. Search for login pages of Zomato by using Google dorking techniques. Write the search query you used and explain why it works.

- I searched a Zomato login pages using google darkling using where I used this query:
- site: zomato.com intitle:login
- site:Zomato.com restricts Google's results to pages indexed under Zomato's domain
- intitle:login searches for pages with "login" in the page title.
- Together, they can identify publicly indexed Zomato pages with login-related URLs without attempting to bypass authentication or access private accounts.

3. Find exposed Excel files containing the word 'playlist' from Spotify-related domains using Google hacking methods. Share your search query and one result (URL) you found.

- I searched using my search query on google to find any exposed excel files on Spotify-related domains, here which I used:
- site: spotify.com filetype:xls "playlist"
- In results, no publicly indexed excel file matching the specified criteria was found.
- The query uses site: spotify.com to restrict results to Spotify's domain, filetype:xls to search for Excel files and "playlist" to require the word "playlist" in the indexed content. No matching publicly accessible Excel file was returned by Google at the time of the search.

4. Identify possible exposed admin panels for any Indian e-commerce site (like Flipkart or Myntra) using Google hacking. Write the dork you used and explain what makes such panels risky if left open.

- To find the exposed admin panels of Flipkart.com, I have used this Google dork here as follows:
- intitle: admin site: flipkart.com
- This Google dork searches for pages within the Flipkart domain whose page title contains the word "admin". Such a query can help to identify potentially exposed or publicly indexed administrative interfaces.
- An exposed admin panel can be risky because it may provide access to sensitive administrative functions. If authentication is weak, misconfigured or vulnerable an attacker could potentially gain unauthorized access, modify application settings, access sensitive information or compromise other parts of the application.
- Finding an admin page in Google does not mean that the page is actually vulnerable. It may be properly protected by authentication and other security controls.
